## Requirement

HR team currently manages employee records using spreadsheets and emails. This results in data inconsistency, manual errors, and difficulty tracking employee status.

Goal is to build a centralized SAP Fiori Employee Management application that allows HR managers to view, create, and update employee information in one system.

## User Persona

Sarah Williams

29 years / Female

HR Manager | Experience: 8+ Years

### Bio:

Sarah is a seasoned HR professional looking to replace slow, manual workflows with a centralized SAP Fiori app to manage employee records quickly and accurately.

### Goals:

- Quickly find employee details
- Update job information easily
- Track active and resigned employees
- Reduce spreadsheet dependency

### Pain Points & Needs:

- Employee data stored in Excel files
- Duplicate entries
- No centralized system
- Manual update errors
- Difficult to track employee status

## Challenge & Solution

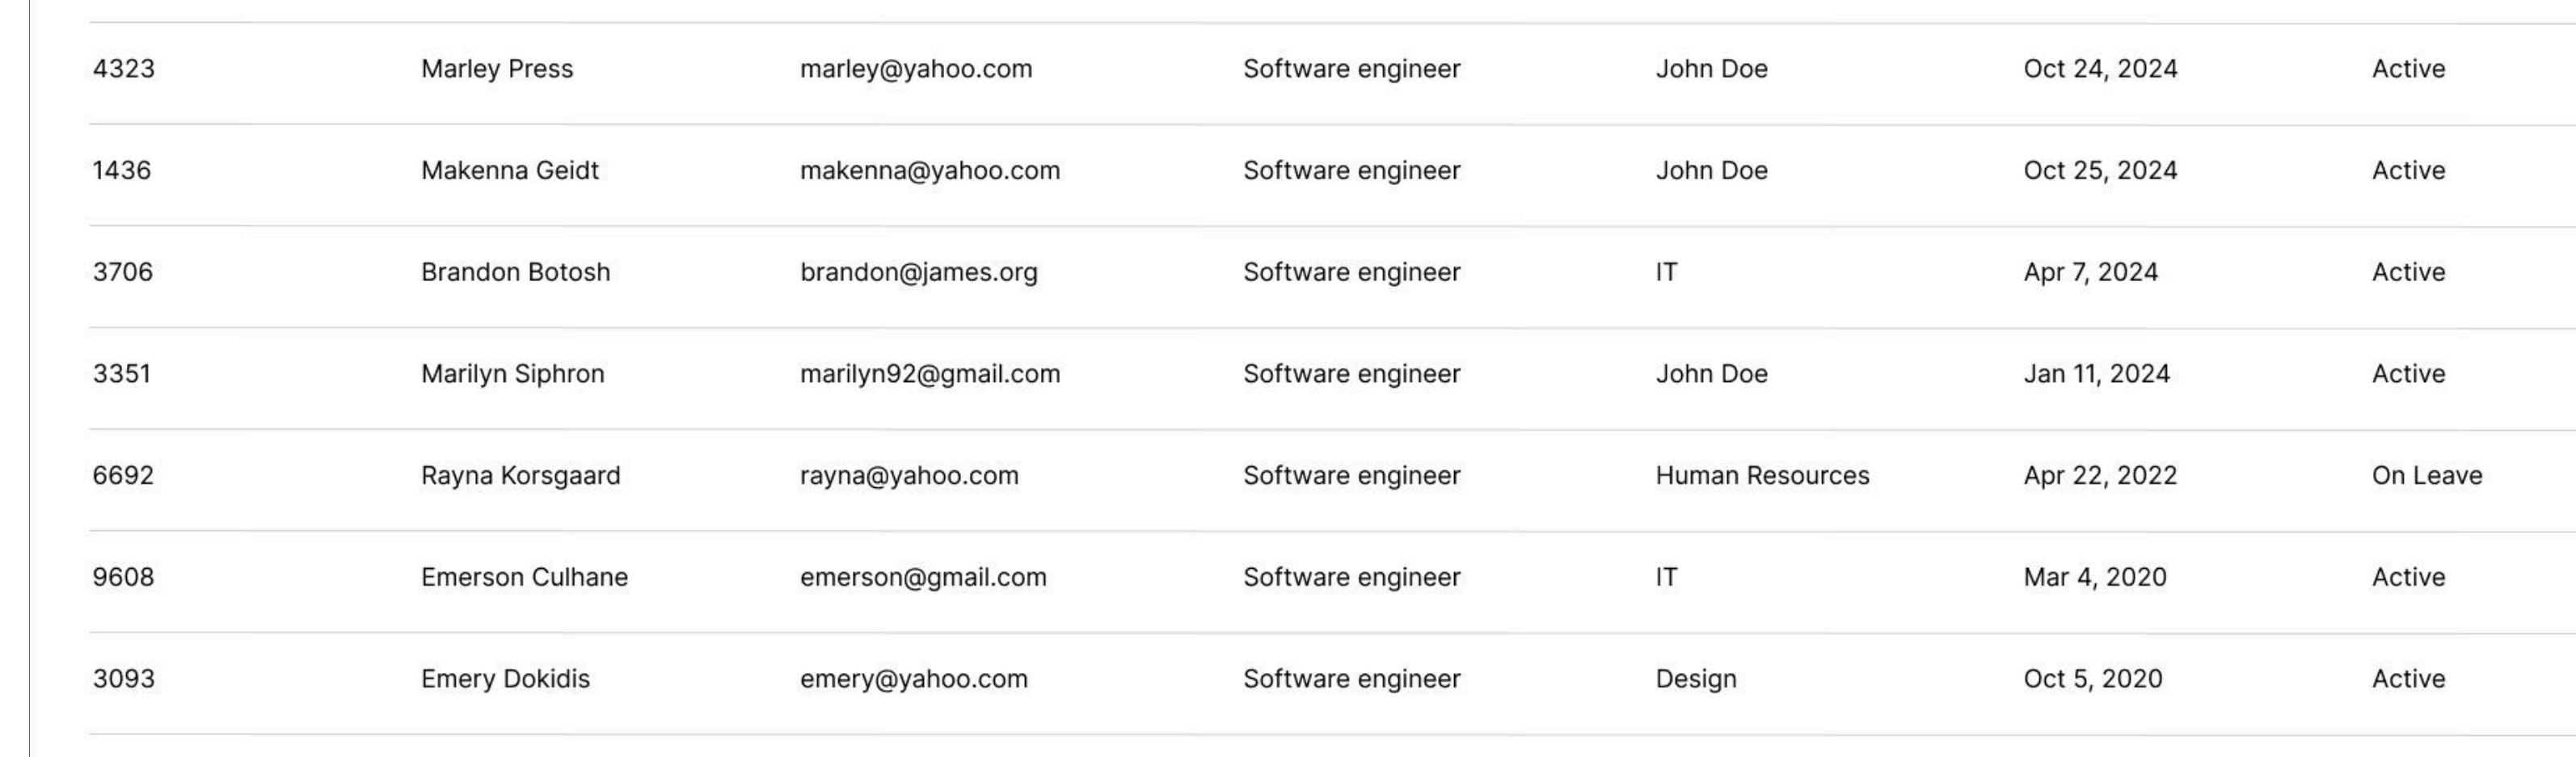

### Challenge:

Managing employee records manually across different departments was slow and prone to errors. Sarah lacked a centralized dashboard, making it difficult to find specific details or update job titles and departments quickly.

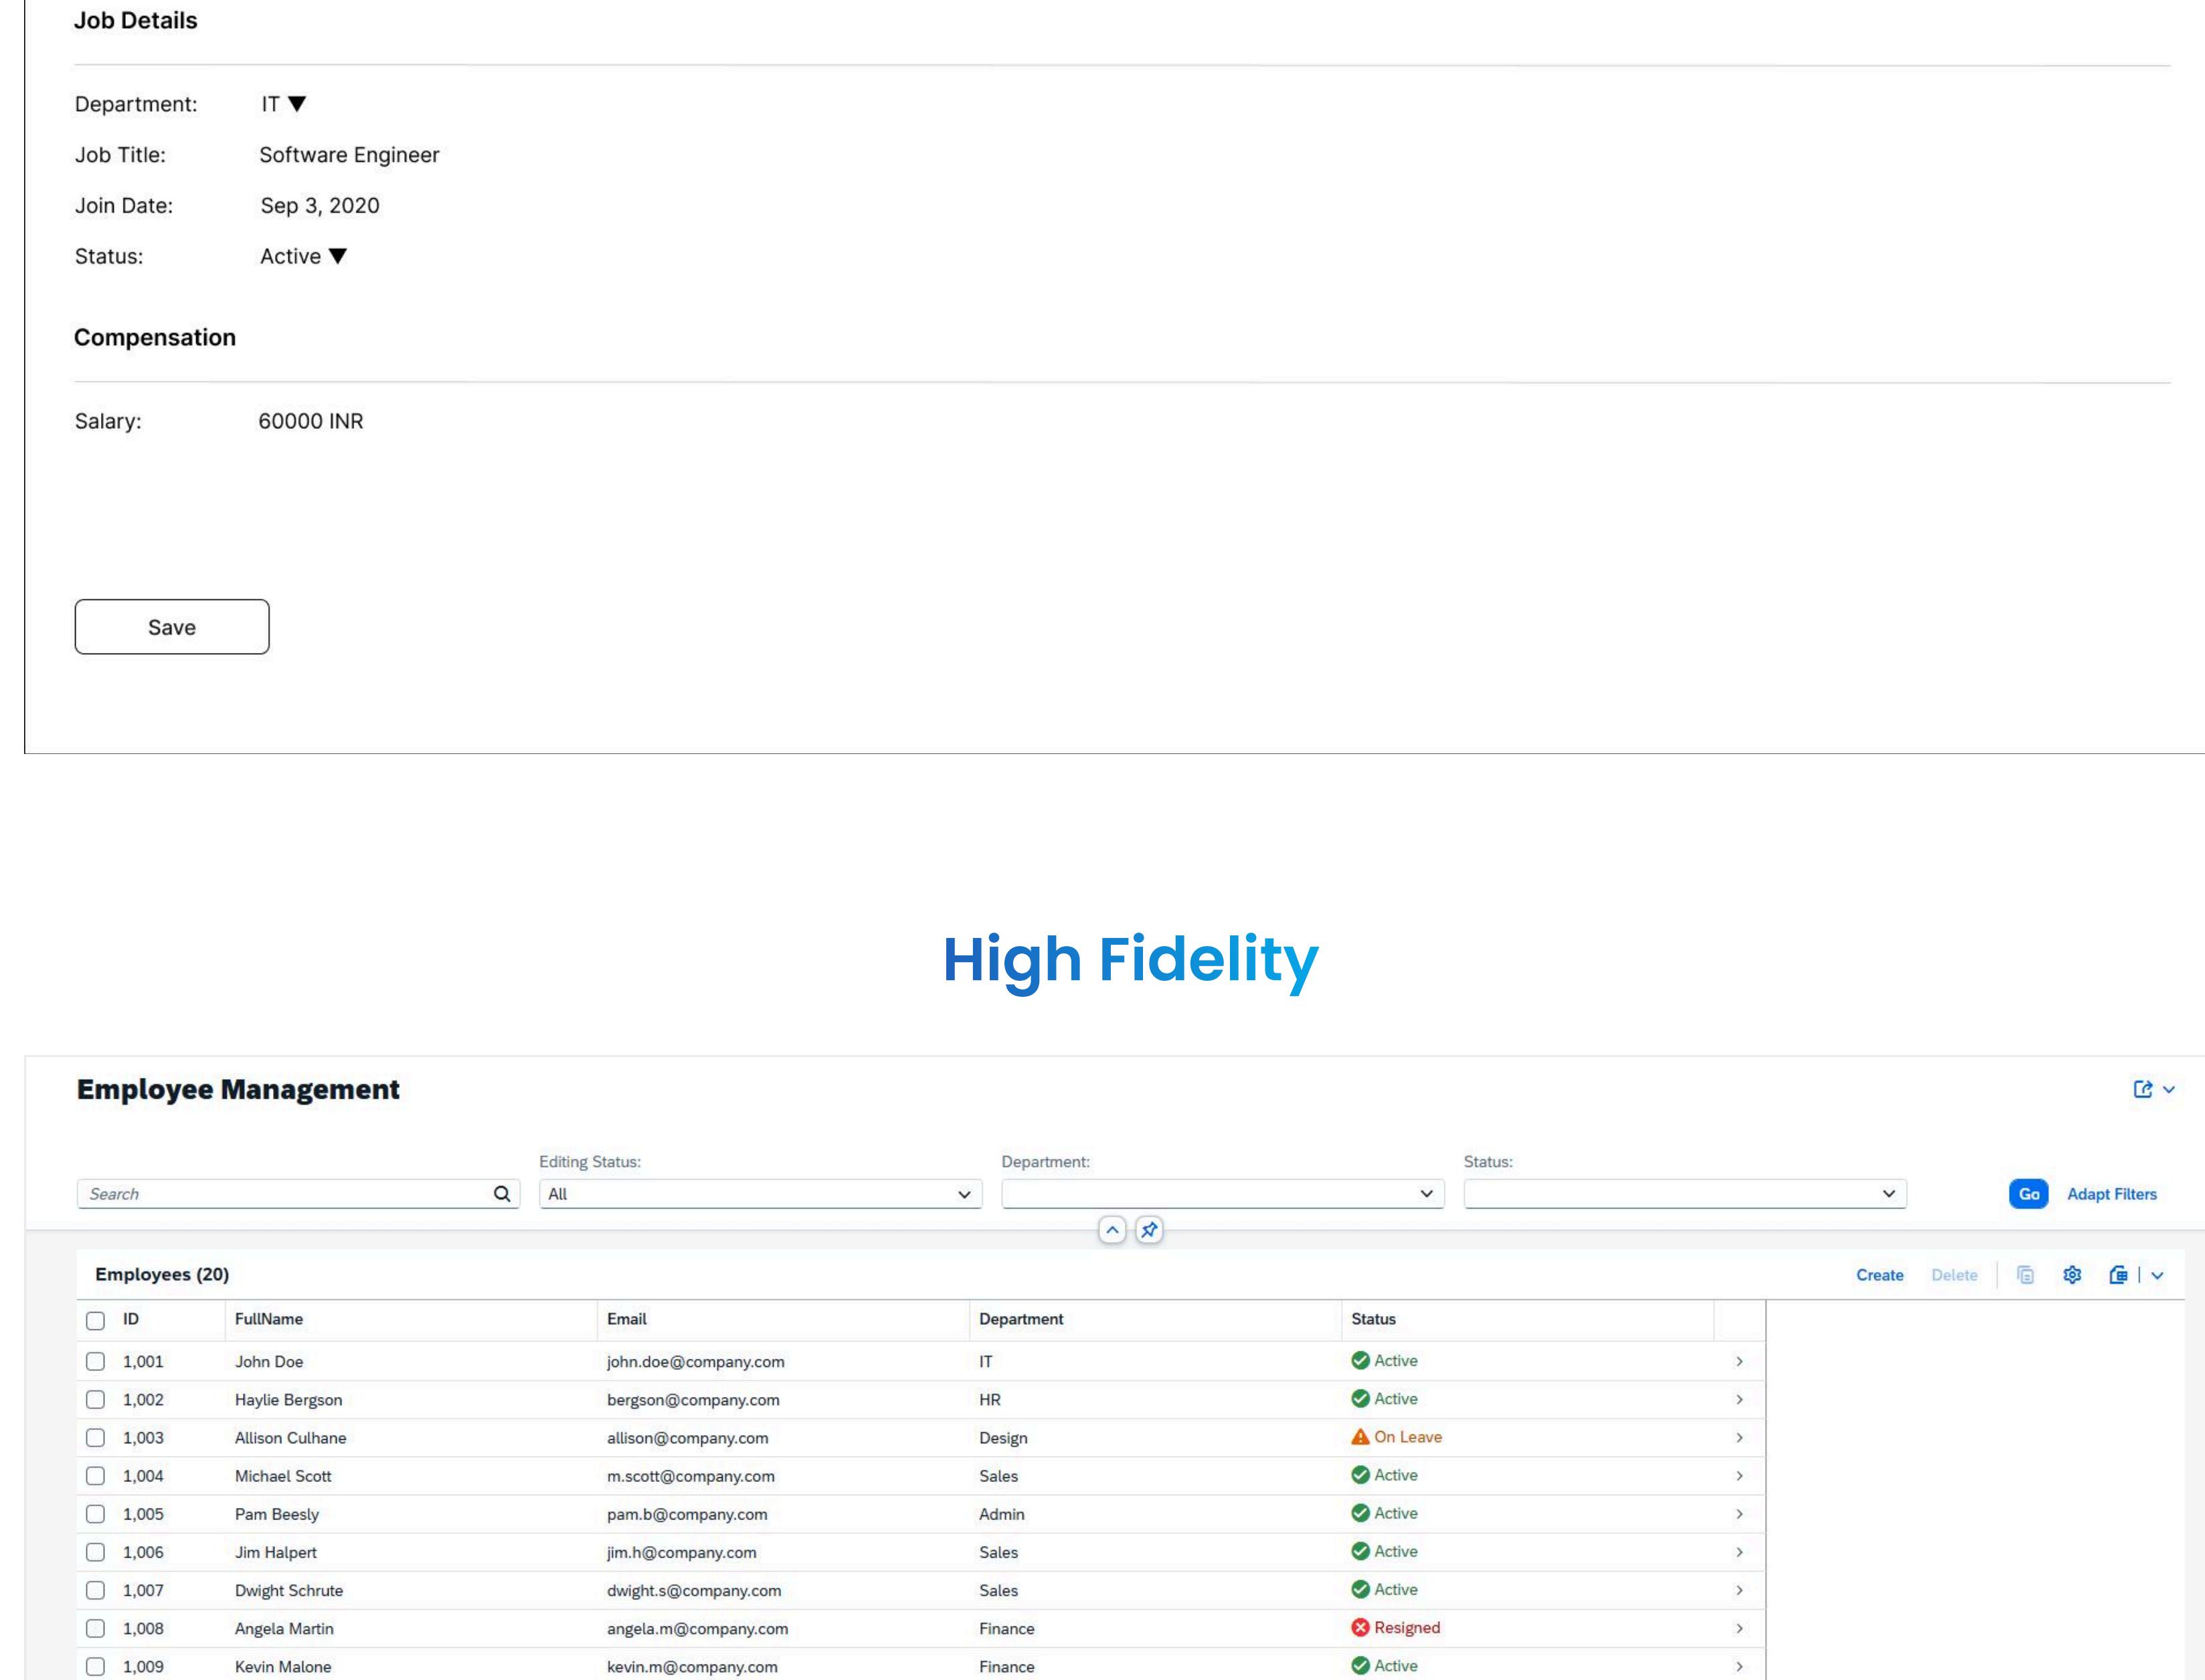

### Solution:

Developed a responsive SAP Fiori Freestyle application that centralizes all employee data. The app provides a searchable list and a dedicated detail view, enabling HR to view and edit information instantly with a professional, user-friendly interface.

## Task Flow

## Information Architecture
